Jibble Group Frontend Developer Assessment

Objective

Create a movie listing app using Vue.js. The app must retrieve a list of movies from the mock API and render them.

User stories

1. I want to see a list of movies from the provided API (see notes below)
2. Each item shows the movie title, year and IMDB id
3. I can browse the list using pagination (10 items per page)
4. I can search for movies by title
5. I can star/unstar a move from the list and keep starred ones in a "Favourites" section

Requirements

● The app must be written in Vue 2 using the Composition API plugin or in Vue 3
● Components must be implemented using the Composition API
● All scripts must be written using TypeScript
● Essential features of the app must be testable with automated unit and end-to-end tests
● The result must be published in a public Github repository

Mock API

https://jsonmock.hackerrank.com/api/movies/search/?Title=${title}&page=${page}
